**Programme Name/s : Mechanical Engineering**  
**Programme Code : ME**  
**Semester : Sixth**  
**Course Title : 3D MODELLING AND ADDITIVE MANUFACTURING**  
**Course Code : 316013**

**I. RATIONALE**

Industry needs to build models-based applications which are being developed using solid modeling software. The 3D Modeling and Additive Manufacturing course equips diploma students with essential skills in designing and producing mechanical parts using 3D modeling and additive technologies.

**II. INDUSTRY / EMPLOYER EXPECTED OUTCOME**

The aim of this course is to help the students to attain the following industry outcome through various teaching learning experience: Apply skills to create, prototype and manufacturing of mechanical components using solid modeling and 3D printing techniques.

**III. COURSE LEVEL LEARNING OUTCOMES (COS)**

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Prepare 2D drawing using sketch toolbar of given 3D modeling software.
- CO2 - Prepare 3D solid models from 2D sketch using given 3D modeling software.
- CO3 - Prepare assembly of part models using given 3D modeling software.
- CO4 - Plot a drawing for given part model/ assembly.
- CO5 - Prepare components of assembly using 3D printer/ rapid prototyping machine.

## V. THEORY LEARNING OUTCOMES AND ALIGNED COURSE CONTENT

Sr.No	Theory Learning Outcomes (TLO's)aligned to CO's.	Learning content mapped with Theory Learning Outcomes (TLO's) and CO's.	Suggested Learning Pedagogies.
1	TLO 1.1 Draw 2D sketch using sketch tool. TLO 1.2 Draw template for 2D sketch.	<b>Unit - I Working in 2D environment</b> 1.1 Drawing tool: Line, Construction line, Rectangle, Polygon, Circle, Arc, Ellipse, Spline, etc. 1.2 Editing tool: Trim, Delete, Extend, Erase, Mirror, etc. 1.3 Modify tool: Chamfer, Fillet, Copy, Move, Pattern etc. 1.4 Linear, Angular dimensions, Dimensional constraint and Geometrical constraint. 1.5 Drawing template: Prepare drawing template consisting of name plate, boundary lines and projection symbol.	Lecture Using Chalk-Board Presentations Video Demonstrations
2	TLO 2.1 Draw 3D models of given components. TLO 2.2 Modify 3D models of given components. TLO 2.3 Draw Auxiliary planes.	<b>Unit - II Development of solid models</b> 2.1 Working in 3D environment: Planes, creating 3D Solid Models of simple machine parts. 2.2 Part tool: Extrude, Hole, Revolve, Rib, Sweep, swept blend, Pattern, etc. 2.3 Part Modify tool: Chamfer, Round, Copy, Move, Draft, etc. 2.4 Creating parts using auxiliary plane.	Demonstration Video Demonstrations
3	TLO 3.1 Assemble given 3D components. TLO 3.2 Produce exploded view of given assembly drawing.	<b>Unit - III Computer aided assembly</b> 3.1 Assembly drawing: Preparation of assembly drawing by using assembly tool. 3.2 Relative degrees of freedom and constraints of assembly. 3.3 Rotational and translational motions of assembly, constraining motions. 3.4 Exploded view: Explode the assembly.	Video Demonstrations Lecture Using Chalk-Board Presentations

**I. RATIONALE**

Effective management is the cornerstone of success for both organizations and individuals. It empowers diploma engineers/ professionals to accomplish their tasks with finesse and efficiency through strategic planning and thoughtful execution, projects can optimize finances, enhance safety measures, facilitate sound decision-making, foster team collaboration and cultivate a harmonious work environment. The diploma engineers require leadership and management skills with technical knowledge of the core field to carry out various tasks smoothly. This course aims to instill fundamental management techniques, empowering diploma engineers/ professionals to enhance their effectiveness in the workplace.

**II. INDUSTRY / EMPLOYER EXPECTED OUTCOME**

The aim of this course is to help the students to attain the following industry identified outcome through various teaching learning experiences: Apply the relevant managerial skills for achieving optimal results at workplace.

**III. COURSE LEVEL LEARNING OUTCOMES (COS)**

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Use relevant management skills to handle work situation
- CO2 - Apply appropriate techniques of product, operations and project management
- CO3 - Use comprehensive tools of recent management practices
- CO4 - Plan suitable marketing strategy for a product / service
- CO5 - Utilize supply chain and human resource management techniques for effective management

#### VII. SUGGESTED MICRO PROJECT / ASSIGNMENT/ ACTIVITIES FOR SPECIFIC LEARNING / SKILLS DEVELOPMENT (SELF LEARNING)

##### Assignment / Article

- Make a one page note based on a book of management you read.
- Write a short article on inventory management exploring online learning resources.
- Prepare a report on ISO standards applicable to your field. a. IATF 16949-2016 / SLA-TS 16949-2016, - Automotive Industry b. ISO 22000 — Food safety management c. ISO 50001 — Energy management d. ISO/IEC 27001 - Cyber Security e. ISO/DIS 4931-1 - Buildings and civil engineering works
- Prepare a 4 quadrant matrix of time management for managing the tasks.
- Prepare a report on any one software used for Supply Chain and Logistics Management.
- Prepare a GANTT Chart for project management related to your field.

##### Note Taking

- Watch a Tedx Talk Video on managerial skills and take notes in the form of keywords.

##### Case Study

- Prepare a case study and discuss the same on following topics a. Self Management Skills b. Six Thinking Hats c. Kaizen d. Quality Circle e. Safety Measures in different organizations related to your field
- Study the recruitment and selection process of any organization related to your field.
- Prepare a case study on management lessons based on life of Chhatrapati Shivaji Maharaj
- Conduct outbound training on managerial skills. Make a video and upload on social media.

##### Quizes

- Workshops to be conducted for students on following topics a. creativity techniques b. time management c. stress management d. negotiation and conflict e. goal setting f. meditation new product development

**Note :**

- Above is just a suggestive list of microprojects and assignments; faculty must prepare their own bank of microprojects, assignments, and activities in a similar way.
- The faculty must allocate judicious mix of tasks, considering the weaknesses and / strengths of the student in acquiring the desired skills.
- If a microproject is assigned, it is expected to be completed as a group activity.
- SLA marks shall be awarded as per the continuous assessment record.
- For courses with no SLA component the list of suggestive microprojects / assignments/ activities are optional, faculty may encourage students to perform these tasks for enhanced learning experiences.
- If the course does not have associated SLA component, above suggestive listings is applicable to Tutorials and maybe considered for FA-PR evaluations.

## I. RATIONALE

Capstone projects in engineering study are considered important as it allow students to integrate and apply the knowledge and skills acquired throughout their academic program and effectively demonstrating their learning of programme by tackling a real-world problem, ultimately keeping them well prepared for the job market. The capstone project is usually the final assignment and plays a vital role in preparing students for the world of work to its practical applications and ability to help hone students' professional knowledge and skills. Normally, capstone projects are developed in collaboration with industries or businesses, providing students with valuable insights. Capstone projects has been considered as an integral part of diploma curriculum. It helps learners to perform and demonstrate skills gained due to early courses of Diploma study independent. Therefore, this is considered as a course of final year/semester study.

## II. INDUSTRY / EMPLOYER EXPECTED OUTCOME

The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- Apply professional skills for solving , executing and demonstrating solutions to real-world problems

## III. COURSE LEVEL LEARNING OUTCOMES (COS)

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Elaborate the identified field problem from the perspective of project work at institute.
- CO2 - Conduct feasibility & viability analysis (using data collection, experiments, Simulation , Coding) to validate required resources, cost, support of the project work.
- CO3 - Apply the acquired knowledge and skills in providing solutions to the real field/industrial problems.
- CO4 - Present Project and its output/ findings / achievements alongwith its exhibits.

## V. General guidelines for PROJECT WORK

- The Project- problems must be related to the programme or may be interdisciplinary, based on the industry expected outcomes.
- The individual students have different aptitudes and strengths. Project work, therefore, should match the strengths of students. For this purpose, students should be asked to identify the type of project work they would like to execute.
- Project titles are to be finalized in co-ordination/consultation with the Faculty mentor. However, faculty may form a team of students as per specific roles- Literature survey/data collection, data Analysts, model/prototype developers, testers, Project managers using IoTs ITES and software /application development. Study type project is NOT advisable.
- Project must be assigned to a group of 3-4 students under the guidance of identified faculty mentor.
- Students are required to prepare a prototype/working model/software of the Project and simultaneously prepare a report.
- Students shall Submit One Hard copy and one Soft copy each of Project Report and soft-copy of the project code or the working model.
- Students must maintain a project execution diary having the progress steps and details. The concerned faculty should check the diary on a weekly basis and accordingly interact with students based on the progress shown and keep proper record with feedback if any.
- Project shall address National Thrust area such as Environment, Digitization, Automation, sustainability and similar domains.
- Student shall try to use the national and international standards wherever possible ( processes / materials / equipments etc .. )

## VI. Project facilitation guidelines:

Once the Project statement has been finalized and allotted to the students, the Faculty Mentor role is very important as guide, motivator, catalyser to promote learning and sustain the interest of the students. At the same time the Faculty Mentor is not expected to guide the students on each step, otherwise it will curb the creativity of the students-group. The Faculty Mentor has to work as a mentor. Following should be kept in mind while facilitating the project at the institute:

**1.Project orientation cum -briefing:** the project should be relevant to the curriculum of the programme. The project shall be cost effective taking safety aspects, ethical issues, environmental issues and confidentiality as per expectation of industry(if any) into consideration, The work may be industry Sponsored.

**2.Information search and data collection:** the information and data should be realistic and relevant to the problem /project. Hypothetical data is not to be taken into consideration.

**3.Implementation and Monitoring:** The project must have important steps /milestones to achieve as per the time frame/action plan prepared by students and faculty. The monitoring mechanism such as daily/weekly dairy (**Format given below**) must be clearly explained and delineated for the students.

## VII.Criteria of Assessment /Evaluation of Project work

### A. Formative Assessment (FA) criteria

The **Formative Assessment (FA)** of the students for 50 marks is to be done based on following criteria.

**Appropriate RUBRICS may be used for assessment**

#### Rubrics for Assessment of the team

Sr.No.	Criteria	Marks
1	Project Selection & Problem definition	05
2	Literature survey and data collection/ Gathering	05
3	Design / concept of project/ Working - Execution of Project	10
4	Stage wise progress as per Action plan/milestone	05
5	Quality Report Writing	05

#### Rubrics for Individual Assessment

Sr.No.	Criteria	Marks
1	Contribution as a team member	05
2	Depth of Knowledge	10
3	Presentation	05

### B. Summative Assessment Criteria

- The summative assessment for 50 marks is to be done and based on following criteria. This assessment shall be done by the faculty mentor and External examiner.

Sr.No.	Criteria	Marks
1	Capstone Project Completion as per plan	10
2	Project related Requirement Analysis & Designing	10
3	Developing a Solution with proper justifications, Teamwork	10
4	Project Report Writing	10
5	Project Presentation	10

( **NOTE** : Team based and Individual performance based summative assessment may include Innovativeness , Technology used , user friendliness , cost effectiveness , society benefits etc..)

**VIII. CO-PO Mapping**

CO-PO mapping will vary project wise and shall be prepared by concerned faculty for the given project

**IX. Typographical instructions/guidelines for Project report writing**

Following is the suggestive format for preparing the Project report. Actual report may differ slightly depending upon the nature of industry. The training report may contain the following.

- a. The PROJECT report shall be computer typed (English- British) and printed on A4 size paper.
- b. Text Font -Times New Roman (TNR), Size-12 point
- c. Subsection heading TNR- 12 point bold normal
- d. Section heading TNR- 12 capital bold
- e. Chapter Name/ Topic Name – TNR- 14 Capital
- f. All text should be justified. (Settings in the Paragraph)
- g. The report must be typed on one side only with double space with a margin 3.5 cm on the left, 2.5 cm on the top, and 1.25 cm on the right and at bottom.
- h. The training report must be hardbound/ Spiralbound with cover page in black colour. The name of the candidate, diploma (department), year of submission, name of the institute shall be printed on the cover [Refer sample sheet (outer cover)]
- i. The training report, the title page [Refer sample sheet (inner cover)] should be given first then the Certificate followed by the acknowledgment and then contents with page numbers.

**X. Project Report**

On completion of the project work, every student will submit a project report which should contain the following:

1. Cover Page (as per annexure 1)
2. Title page (as per annexure 2)
3. Certificate by the Guide (as per annexure 3)
4. Acknowledgment (The candidate may thank all those who helped in the execution of the project.)
5. Abstract (It should be in one page and include the purpose of the study; the methodology used.)
6. Table of Contents (as per general guidelines): Detailed description of the project (This should be split in various chapters/sections with each chapter/section describing a project activity in totality).

Chapter–1 Introduction (background of the Industry or User based Problem/Task)

Chapter–2 Literature Survey (to finalize and define the Problem Statement)

Chapter–3 Scope of the project

Chapter–4 Methodology/Approach, if any

Chapter-5 Details of designs, working and processes

Chapter-6 Results and Applications

7. Conclusion

8. References (The listing of references should be typed 2 spaces below the heading “REFERENCES” in alphabetical order in single spacing left – justified. It should be numbered consecutively (in square [ ] brackets, throughout the text and should be collected together in the reference list at the end of the report. The references should be numbered in the order they are used in the text. The name of the author/authors should be immediately followed by the year and other details). Typical examples of the references are given below:

**NOTE:**

1. Project report must contain only a relevant and short mention – technology or platform or tools used. It must be more focussed on project work and its implementation
2. Students can add/remove/edit chapter names as per the discussion with their guide

**Course Code** : 316357

### I. RATIONALE

Machine Design is the strategy of developing new or improved machines to accomplish direct/indirect human based need. Design department of industry is one of the major job areas for Diploma Technicians. A Diploma holder is required to assist in the Design and Development of Prototype and other components. For this, it is essential that he is made conversant with usual fundamental design procedures, IS codes, standards and guidelines for selection of appropriate material. Diploma student should also be aware of the principles related to design of machine components and its applications. This course aims at developing analytical and selection abilities in the student to give solutions to simple engineering design problems using standard procedures.

### II. INDUSTRY / EMPLOYER EXPECTED OUTCOME

The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences: Apply various design principles & procedures for designing simple machine components.

### III. COURSE LEVEL LEARNING OUTCOMES (COS)

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Use fundamental concepts of design of machine elements for given application
- CO2 - Determine the dimensions of joints and levers.
- CO3 - Select the dimensions of shafts, keys, couplings and bearings used in Power transmission.
- CO4 - Select the suitable thread ( Screw and Nut) screws for power transmission and fasteners.
- CO5 - Design springs for the given load conditions.

## **VII. SUGGESTED MICRO PROJECT / ASSIGNMENT/ ACTIVITIES FOR SPECIFIC LEARNING / SKILLS DEVELOPMENT (SELF LEARNING)**

### **Assignment**

- find load, stresses on single point cutting tool and also prepare chart/model for the same.
- Make models of various joints and levers highlight resisting sections of different elements. (use wood or M.S material )
- Prepare list of different types of bearings used in a bike and write their specifications and basis for selection.
- Prepare list of different types of levers and springs used in a bike, bicycle, Auto Rickshaw, Moped and write their specifications and basis for selection
- Make chart indicating different thread profile and sizes required for different loads in case of screw jack, toggle jack, C-clamps and lead screw of machines.
- Collect different types of springs and write applications of the same.

### **Micro project**

- Make models of various joints and levers highlight resisting sections of different elements
- Make models of various shafts, keys and pulleys highlight resisting sections
- Make models of various couplings highlight resisting sections of different elements
- Prepare model of eccentrically loaded bolted and welded joint and highlight the maximum loaded section.
- Make chart indicating different thread profile and sizes

### **Field visit**

- Field visit to nearby industries

**Note :**

- Above is just a suggestive list of microprojects and assignments; faculty must prepare their own bank of microprojects, assignments, and activities in a similar way.
- The faculty must allocate judicious mix of tasks, considering the weaknesses and / strengths of the student in acquiring the desired skills.
- If a microproject is assigned, it is expected to be completed as a group activity.
- SLA marks shall be awarded as per the continuous assessment record.
- For courses with no SLA component the list of suggestive microprojects / assignments/ activities are optional, faculty may encourage students to perform these tasks for enhanced learning experiences.
- If the course does not have associated SLA component, above suggestive listings is applicable to Tutorials and maybe considered for FA-PR evaluations.

**Course Code : 316362**

### I. RATIONALE

In today's highly competitive industrial environment, efficiency and quality are critical for organizational success. Industrial Engineering focuses on process optimization, resource utilization, and system efficiency, while quality control ensures that products and services meet predefined standards. The integration of these two aspects enables industries to minimize waste, reduce costs, enhance product reliability, and improve customer satisfaction. This course plays a crucial role in developing Mechanical Diploma Engineering students with the knowledge and skills required to optimize industrial processes, enhance productivity, and ensure quality in manufacturing and service sectors by using conventional as well as modern computerized methods.

### II. INDUSTRY / EMPLOYER EXPECTED OUTCOME

The aim of this course is to help the students to attain the following industry identified outcome through various teaching learning experiences: Apply knowledge & skills related to Industrial Engineering for enhancement of quality & productivity..

### III. COURSE LEVEL LEARNING OUTCOMES (COS)

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Prepare the process sheet in given situation.
- CO2 - Apply work study techniques for optimizing manufacturing processes.
- CO3 - Apply quality control tools for monitoring product quality in industrial processes.
- CO4 - Determine process Capability using Statistical Quality Control techniques.
- CO5 - Choose relevant computer aided quality control / inspection method for manufacturing.

- Industrial Visit to an Automobile manufacturing plant
- Collect an information and make a report about Quality Circle forum of India. (QCFI)
- Collect an information and make a report about different software's used in CAPP, CAQC and CAI
- Choose a task (Typing a document, packing items, assembling a small product etc.), record time for each step using a stopwatch, and analyze it. Suggest improvements if any.
- Analyze the ergonomic setup of a workstation (e.g., Computer desk, Assembly line, Kitchen work area of a Canteen, Machine shop arrangement, Inspection table). Identify posture issues, repetitive strain risks, and suggest ergonomic improvements.
- Visit to Small-Scale Industry, create a layout to reduce material handling time and improve workflow efficiency.
- Prepare Wall Chart of 3 Sigma and Six Sigma Curves.
- Prepare a wall chart using standard Therbligs, Giving meaning of Each Symbol.
- Compare Manual Process planning with a computer aided approach.

**Note :**

- Above is just a suggestive list of microprojects and assignments; faculty must prepare their own bank of microprojects, assignments, and activities in a similar way.
- The faculty must allocate judicious mix of tasks, considering the weaknesses and / strengths of the student in acquiring the desired skills.
- If a microproject is assigned, it is expected to be completed as a group activity.
- SLA marks shall be awarded as per the continuous assessment record.
- For courses with no SLA component the list of suggestive microprojects / assignments/ activities are optional, faculty may encourage students to perform these tasks for enhanced learning experiences.
- If the course does not have associated SLA component, above suggestive listings is applicable to Tutorials and maybe considered for FA-PR evaluations.

**I. RATIONALE**

Hydraulic and pneumatic control systems are widely used in various industries due to their versatility and adaptability to automation. It plays vital role in modernization, semi automation and automation of various industrial equipment. This course will impart the basic skills and knowledge to diploma technician to use and maintain different types of hydraulic and pneumatic systems.

**II. INDUSTRY / EMPLOYER EXPECTED OUTCOME**

The aim of this course is to help the students to attain the following industry identified outcome through various teaching learning experiences: Use different types of hydraulic and pneumatic systems for various engineering applications.

**III. COURSE LEVEL LEARNING OUTCOMES (COS)**

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Identify various components of hydraulic and pneumatic systems from their symbols
- CO2 - Select pump, compressor and actuator for given fluid operated system.
- CO3 - Select appropriate control valves for given fluid operated system.
- CO4 - Select appropriate special components for advanced fluid operated system.
- CO5 - Develop hydraulic and pneumatic circuits for given applications.

**VII. SUGGESTED MICRO PROJECT / ASSIGNMENT/ ACTIVITIES FOR SPECIFIC LEARNING / SKILLS DEVELOPMENT (SELF LEARNING)****Micro project**

- This course has no SLA allocated but course teacher can optionally allot microprojects to the students to enhance learning. A suggestive list of micro-projects is given here. Similar micro-projects could be added by the concerned faculty: a. Market survey of oil used in hydraulic system(Manufacturers, specifications, trade names, cost, packing size) b. Prepare working model of hydraulic crane using waste injections used by Doctors. c. Prepare report of agriculture equipment working on hydraulic and pneumatics. (field based) d. Prepare visit report to observe use of Pneumatic system used by Dentist. e. Prepare visit report on automobile vehicle cleaning service station to observe the hydraulic actuator and system used. f. Prepare display board by collecting sample of pipes and pipe fittings with specifications of different manufactures.(New/Worn out)

**Note :**

- Above is just a suggestive list of microprojects and assignments; faculty must prepare their own bank of microprojects, assignments, and activities in a similar way.
- The faculty must allocate judicial mix of tasks, considering the weaknesses and / strengths of the student in acquiring the desired skills.
- If a microproject is assigned, it is expected to be completed as a group activity.
- SLA marks shall be awarded as per the continuous assessment record.
- For courses with no SLA component the list of suggestive microprojects / assignments/ activities are optional, faculty may encourage students to perform these tasks for enhanced learning experiences.
- If the course does not have associated SLA component, above suggestive listings is applicable to Tutorials and maybe considered for FA-PR evaluations.

**Course Title : ALTERNATIVE ENERGY SOURCES AND ENERGY MANAGEMENT**  
**Course Code : 316364**

### I. RATIONALE

The conventional energy resource is limited in nature and will be exhausted in future. With increasing environmental concerns and depleting fossil fuels, its necessary to understand and work with renewable energy sources like solar, wind, and biomass. Recently significant advances are made in utilization of solar energy in heating and electrical energy conversion applications. Biomass and bio fuels are also getting importance. This course is designed for diploma students to acquire skills in operating and maintaining the renewable energy technologies for its proper utilization through energy management practices.

### II. INDUSTRY / EMPLOYER EXPECTED OUTCOME

The aim of this course is to help the students to attain the following industry identified outcome through various teaching learning experience: Maintain various types of renewable energy systems efficiently and economically following standard procedures.

### III. COURSE LEVEL LEARNING OUTCOMES (COS)

Students will be able to achieve & demonstrate the following COs on completion of course based learning

- CO1 - Select proper instruments for performing energy audit.
- CO2 - Identify energy conservation opportunities in mechanical and electrical systems.
- CO3 - Design cost effective solar thermal and photovoltaic system as per requirement.
- CO4 - Utilize wind and biomass as a renewable energy technology for energy generation.
- CO5 - Select suitable source(s) of energy generation using principles of renewable energy.

Digital multimeter - DC Voltage up to 600V, AC Voltage up to 600V, DC Current up to 20A Digital Infrared Thermometer- Temperature Range -50 °C to 550 °C Lux Meter (Illuminance Meter) – Range 0 to 2,00,000 LUX Digital Humidity meter - Temperature Range: -50 °C to 70°C, Humidity Range: 20% to 90%	1,2,3,4,5,7,8
3	Solar module up to 150 Watt, 12V, Polycrystalline	5
4	Solar dryer: - Capacity 5 to 10 kg Per Day Drying, Drying Tray 2 numbers Food, Grade Aluminum Perforated, Temperature Range - 55 to 85 deg Celsius	7

Sr.No	Equipment Name with Broad Specifications	Relevant LLO Number
5	Solar Box Type Cooker, Temperature ranges up to 100 degrees Celsius	8
6	Digital anemometer – Air velocity 0 to 45 m/s, Temperature Range up to 50 degrees Celsius	9

### IX. SUGGESTED WEIGHTAGE TO LEARNING EFFORTS & ASSESSMENT PURPOSE (Specification Table)

Sr.No	Unit	Unit Title	Aligned COs	Learning Hours	R-Level	U-Level	A-Level	Total Marks
1	I	Energy Scenario and Audit	CO1	10	2	4	6	12
2	II	Energy Management and Conservation	CO2	10	2	4	6	12
3	III	Direct use of Solar Energy	CO3	16	2	6	12	20
4	IV	Indirect use of Solar Energy	CO4	10	2	4	6	12
5	V	Other Renewable Energy Sources	CO5	14	2	8	4	14
<b>Grand Total</b>				<b>60</b>	<b>10</b>	<b>26</b>	<b>34</b>	<b>70</b>

### X. ASSESSMENT METHODOLOGIES/TOOLS

#### Formative assessment (Assessment for Learning)

- Two-unit tests of 30 marks and average of two-unit tests.
- For laboratory learning 25 Marks

#### Summative Assessment (Assessment of Learning)

- End semester assessment of 70 marks.
- End semester assessment of 25 marks for laboratory learning.

### XI. SUGGESTED COS - POS MATRIX FORM

Course Outcomes (COs)	Programme Outcomes (POs)							Programme Specific Outcomes* (PSOs)		
	PO-1 Basic and Discipline Specific Knowledge	PO-2 Problem Analysis	PO-3 Design/ Development of Solutions	PO-4 Engineering Tools	PO-5 Engineering Practices for Society, Sustainability and Environment	PO-6 Project Management	PO-7 Life Long Learning	PSO-1	PSO-2	PSO-3
CO1	3	2	2	3	3	2	3			
CO2	3	2	2	3	3	2	3			
CO3	3	2	3	3	3	2	3			
CO4	3	2	2	-	3	2	3			
CO5	3	-	-	-	3	-	3
